Learning Path 10: Manage Microsoft 365 services by using Windows PowerShell

Learning objectives

- Manage users, groups, and licenses in Microsoft Entra ID by using Windows PowerShell
- Manage Exchange Online by using Windows PowerShell
- Manage SharePoint Online by using Windows PowerShell
- Manage Microsoft Teams by using Windows PowerShell

© Copyright Microsoft Corporation. All rights reserved.

Agenda

LP 1 Get started with Windows PowerShell

LP 2 Maintain system administration tasks in Windows PowerShell

LP 3 Work with the Windows PowerShell pipeline

LP 4 Work with PowerShell providers and PowerShell drives in Windows PowerShell

LP 5 Querying management information by using CIM and WMI

LP 6 Use variables, arrays, and hash tables in Windows PowerShell scripts

LP 7 Create and modify scripts by using Windows PowerShell

LP 8 Administer remote computers by using Windows PowerShell

LP 9 Manage cloud resources by using Windows PowerShell

LP 10 Manage Microsoft 365 services by using Windows PowerShell

LP 11 Create and manage background jobs and scheduled jobs in Windows PowerShell

Login-Connect-AzAccount

Search-AzGraph

Azure

Overview

Microsoft 365 is a cloud service that includes many components. The most commonly used services in Microsoft 365 are Microsoft Entra ID, Exchange Online, SharePoint Online, and Microsoft Teams. To efficiently manage Microsoft 365 and gain access to all configuration options, you should know how to use PowerShell to manage those services.

Modules:

- Manage users, groups, and licenses in Microsoft Entra ID by using Windows PowerShell
- Manage Exchange Online by using Windows PowerShell
- Manage SharePoint Online by using Windows PowerShell
- Manage Microsoft Teams by using Windows PowerShell

Microsoft Graph

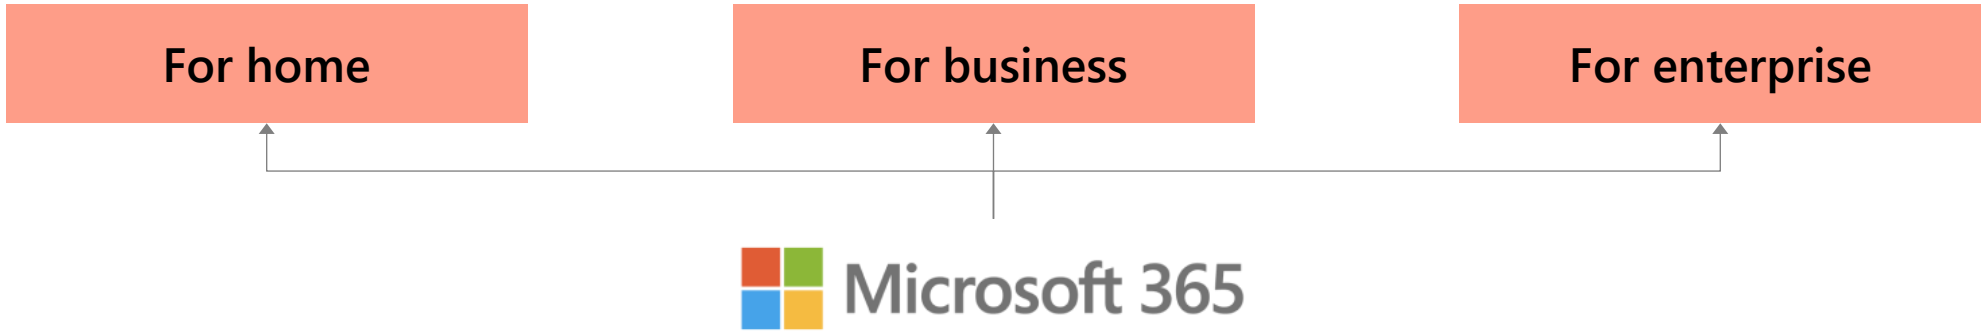
What is Microsoft 365?

Microsoft 365 is a cloud-powered productivity platform that brings together the best-in-class productivity apps from Office 365 with advanced device management, intelligent security, and innovative online services.

Microsoft 365 helps drive productivity, collaboration, and communication securely across many devices, whether you are at home, in the office, out in the field, or on the go.



© Copyright Microsoft Corporation. All rights reserved.

Examine Microsoft Exchange, Teams, and SharePoint

Configuring Microsoft 365's core collaboration services—Exchange Online, Teams, and SharePoint Online—is essential for enabling secure, efficient, and seamless communication and teamwork across an organization

The role of Microsoft Graph API

Azure
ARM API
Bicep Lang

Microsoft Graph is the gateway to rich, people-centered data and intelligence in Microsoft 365.

- Microsoft Graph makes it easy to stay connected to your work, no matter what device you're on.
- Microsoft 365 learns from users and collects insights through Microsoft Graph by analyzing users' data and activities across different Microsoft products and services.
- Microsoft Graph plays a vital role in **Microsoft 365 Copilot**, an AI-powered productivity tool coming soon to Microsoft 365.

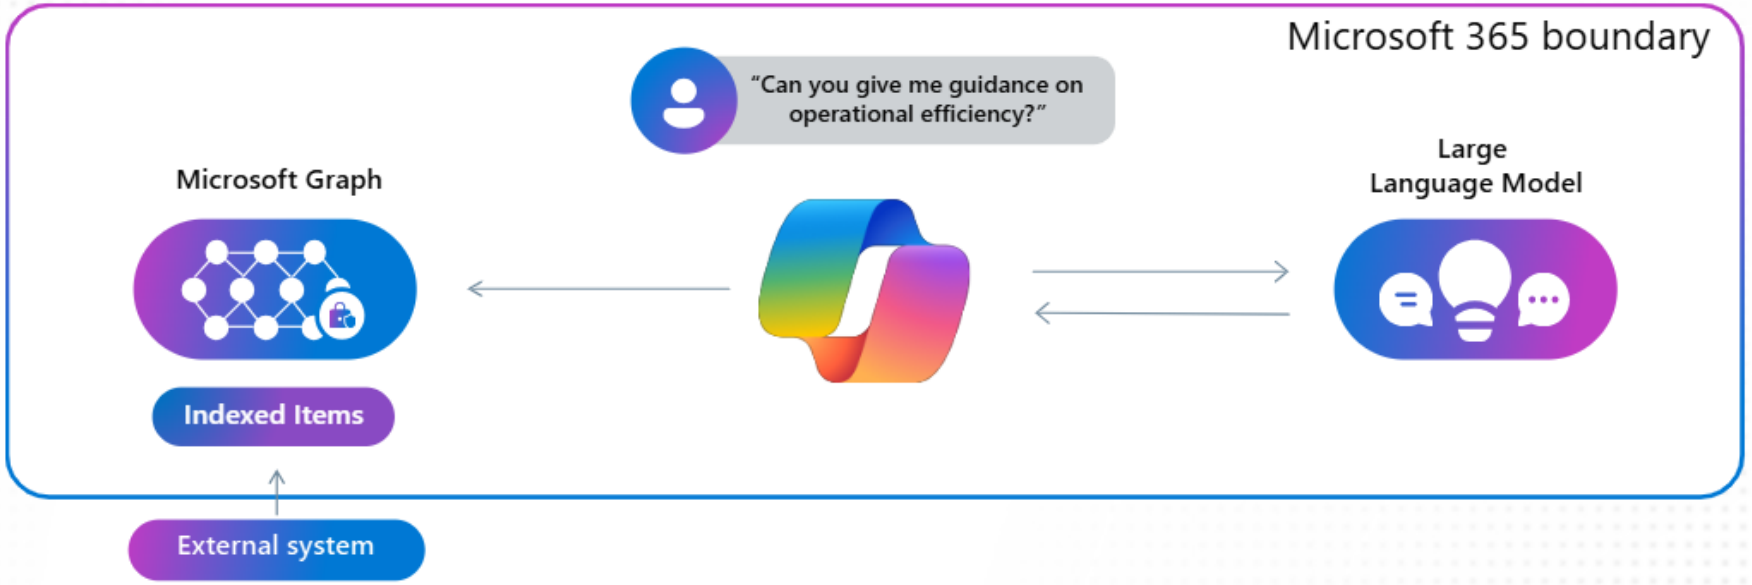
Introduction to Microsoft 365 Copilot

The orchestration service is the engine room of Copilot - it manages how user prompts, Microsoft Graph data, and the LLM interact to produce secure, relevant results

- The orchestration service supports plugins and connectors to external systems like CRM, ERP, or HR platforms
- This feature allows organizations to extend Copilot's reach to line-of-business applications



Copilot connectors perform read-only operations by importing and indexing data into the Microsoft 365 graph. Since the data resides within the Microsoft 365 service boundary, all data handling and privacy commitments applicable to M365 also extend to copilot connector data.

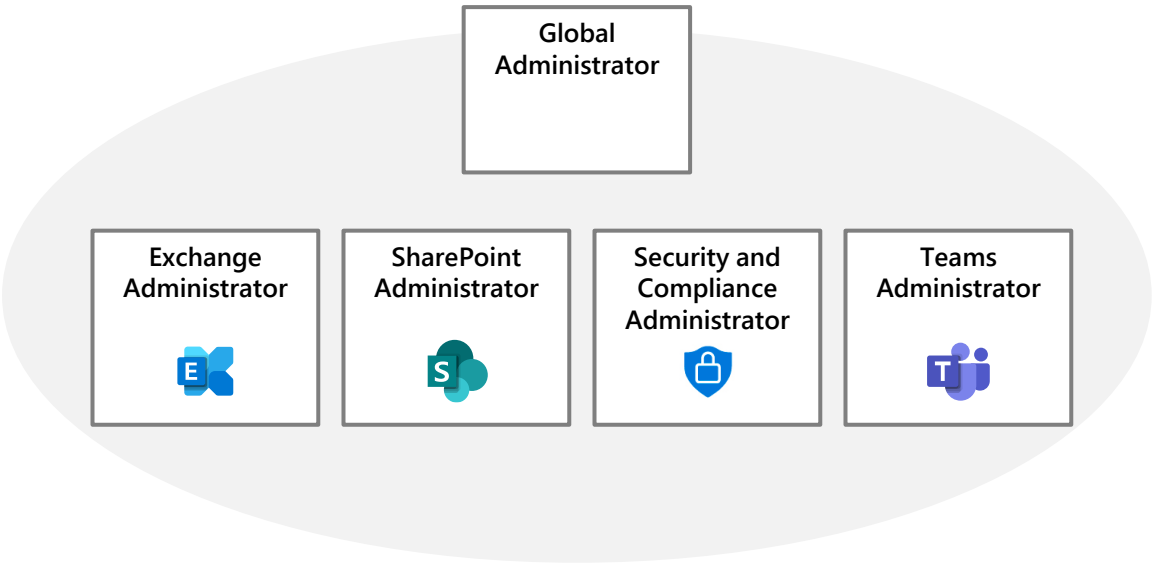
Assign admin roles to users in Microsoft 365

In Microsoft 365, administrator roles assign specific administrative functions to users

- Each admin role maps to common business functions and gives permissions to do specific tasks in the Microsoft 365 admin center
- A user can be assigned multiple admin roles since they're not mutually exclusive
- You can manage admin roles in the Microsoft 365 admin center or Windows PowerShell
- To assign admin roles in the Microsoft 365 admin center, you must be assigned the Global administrator role

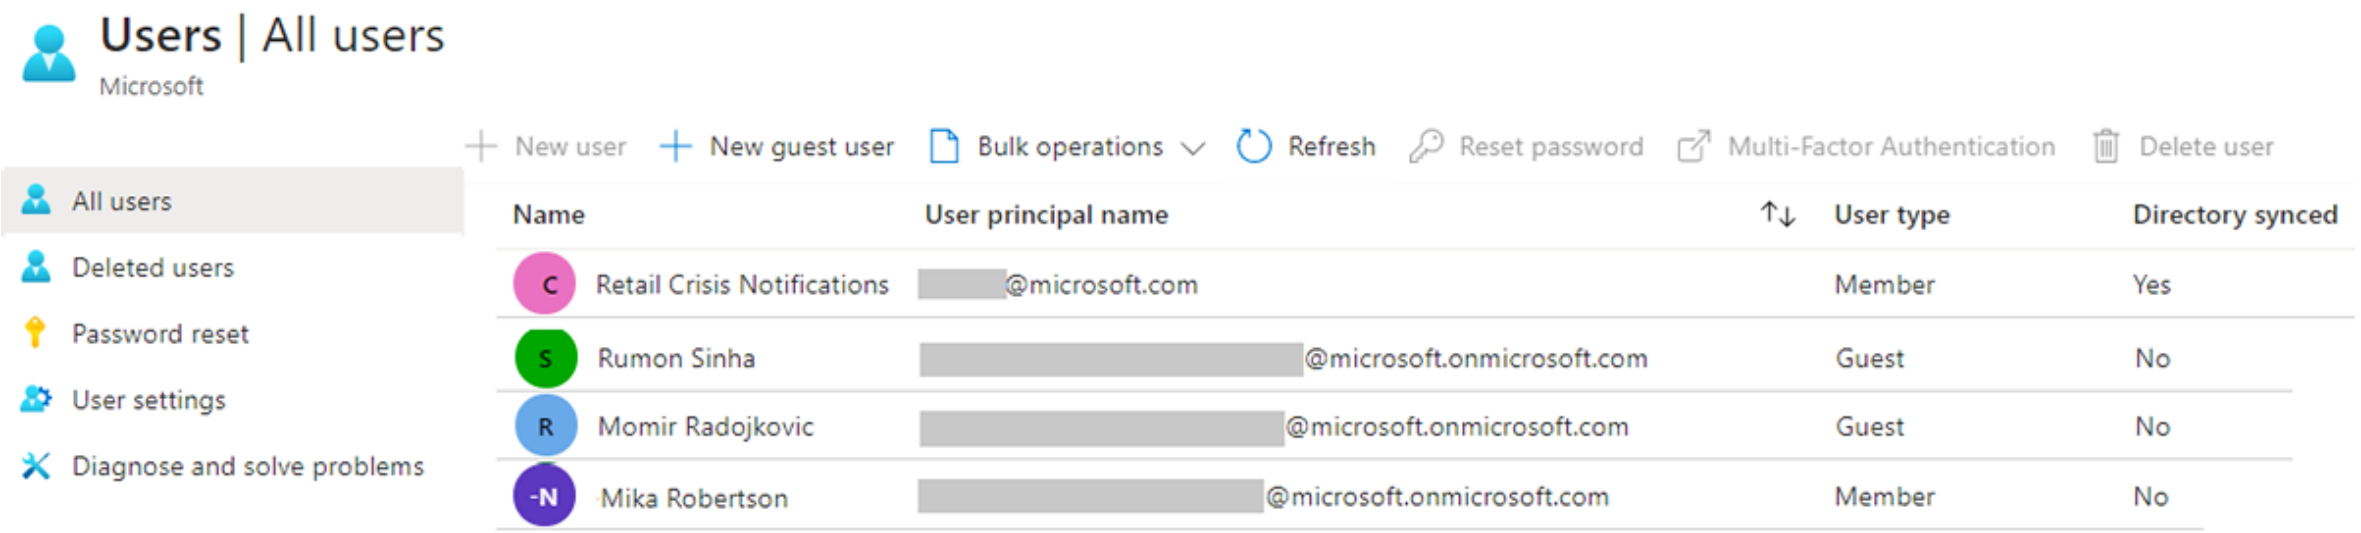


The Global administrator role includes ALL the service administrator roles, and not just the four shown in this example

Individual service administrators can administer their services on the highest level

© Copyright Microsoft Corporation. All rights reserved.

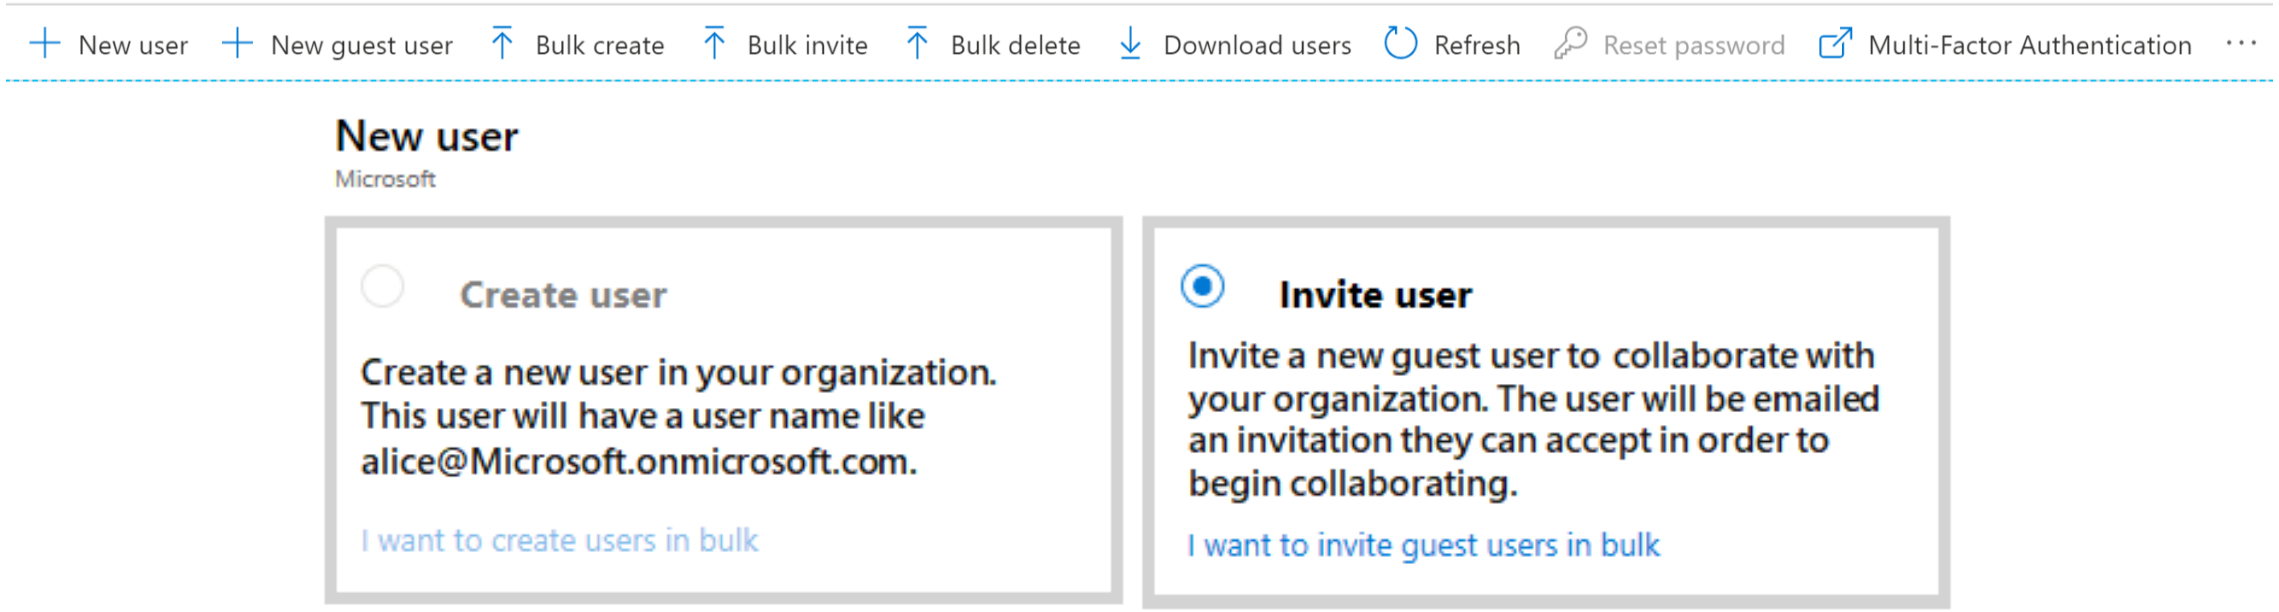
Create User Accounts



- All users must have an account
- The account is used for authentication and authorization
- Each user account has additional properties

© Copyright Microsoft Corporation. All rights reserved.

Manage User Accounts



- Must be Global Administrator or User Administrator to manage users
- User profile (picture, job, contact info) is optional
- Deleted users can be restored for 30 days
- Sign in and audit log information is available

© Copyright Microsoft Corporation. All rights reserved.

Create Group Accounts

Search groups

Name	Group Type	Membership Type
MA Managers	Security	Assigned
VM Virtual Machine Administrators	Security	Assigned
VN Virtual Network Administrators	Security	Assigned

Group Types

- Security groups
- Microsoft 365 groups

Membership Types

- Assigned
- Dynamic User
- Dynamic Device (Security groups only)

© Copyright Microsoft Corporation. All rights reserved.

Assign Licenses to Users and Groups

Azure is a cloud service that provides many built-in services for free.

- Microsoft Entra ID comes as a free service
- Gain additional functionality with a P1 or P2 license

Additional Services (like O365 are paid cloud services)

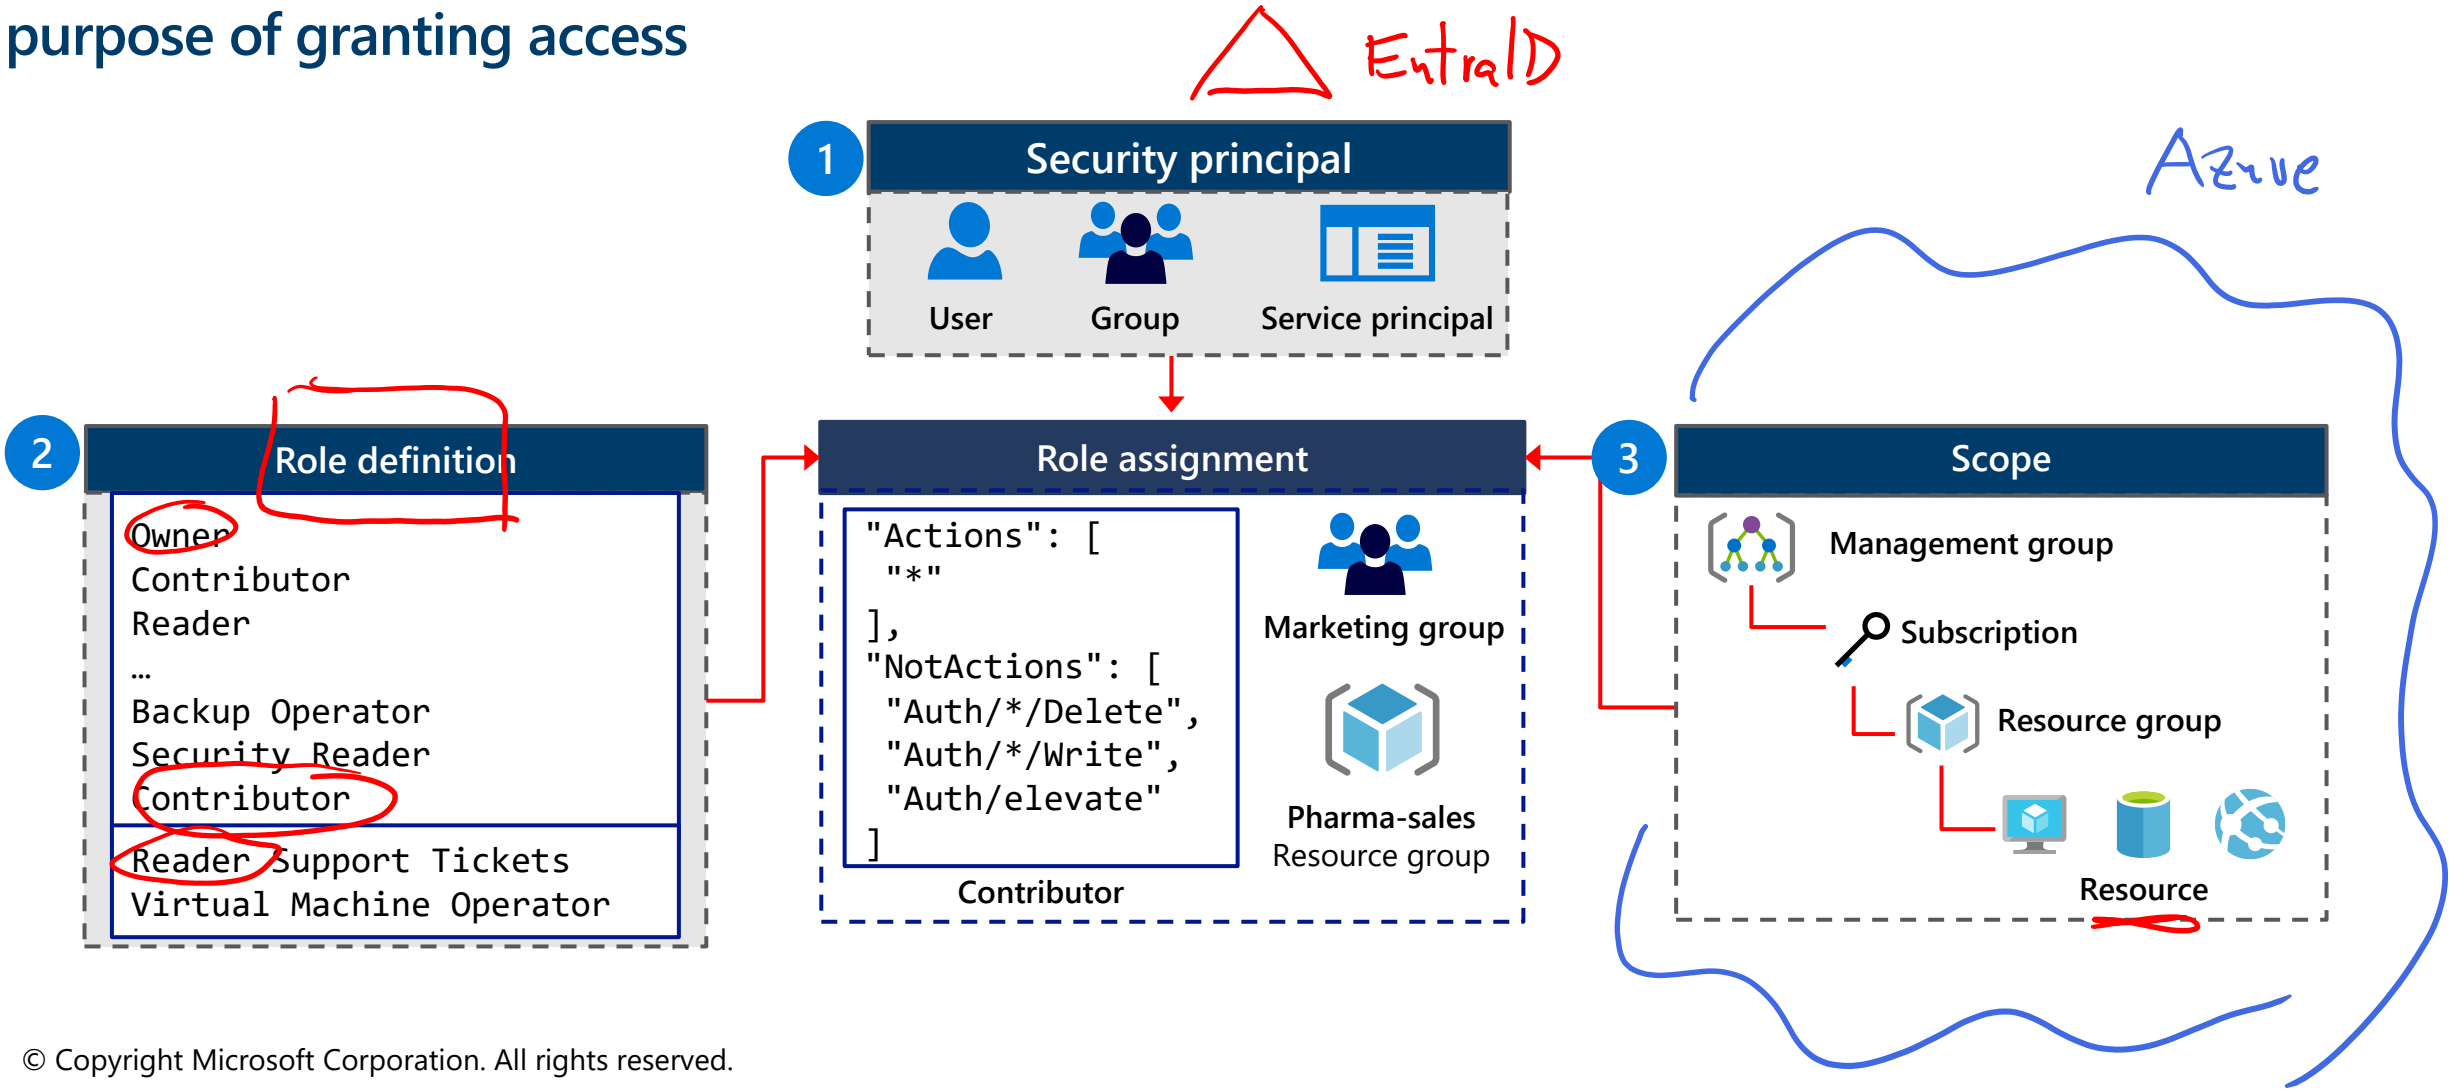
- Microsoft paid cloud services require licenses
- Licenses are assigned to those who need access to the services
- Each user or group requires a separate paid license
- Administrators use the Microsoft 365 Admin portal and Microsoft Graph PowerShell cmdlets to manage licenses

- ❑ View license plans and plan details
- ❑ Set the Usage Location parameter
- ❑ Assign licenses to users and groups
- ❑ Change license plans for users and groups
- ❑ Remove a license

© Copyright Microsoft Corporation. All rights reserved.

Create a Role Assignment

Process of binding a role definition to a user, group, or service principal at a scope for the purpose of granting access



© Copyright Microsoft Corporation. All rights reserved.

Explore administrator roles in Microsoft 365

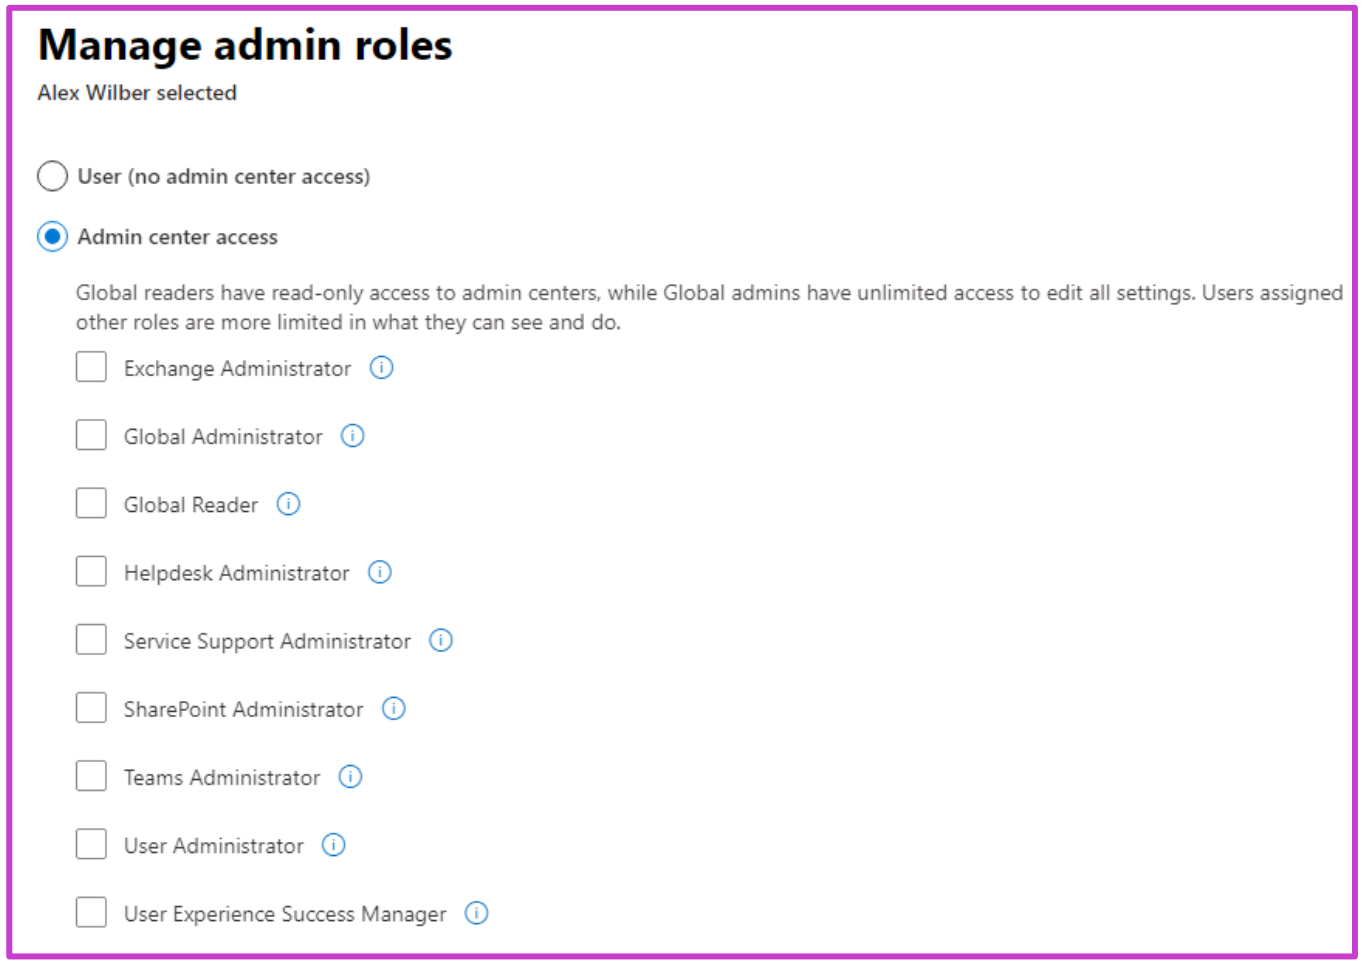
RBAC

Security guidelines for assigning roles:

- Only establish two to four global admins
- Assign the least permissive role
- Require multifactor authentication (MFA) for admins

Some commonly used Microsoft 365 admin center roles:

- Billing Administrator
- Compliance Administrator
- Exchange Administrator
- Global Administrator
- Global Reader
- Groups Administrator
- Helpdesk Administrator
- License Administrator
- Message Center Reader
- Office Apps Administrator
- Password Administrator
- Power Platform Administrator

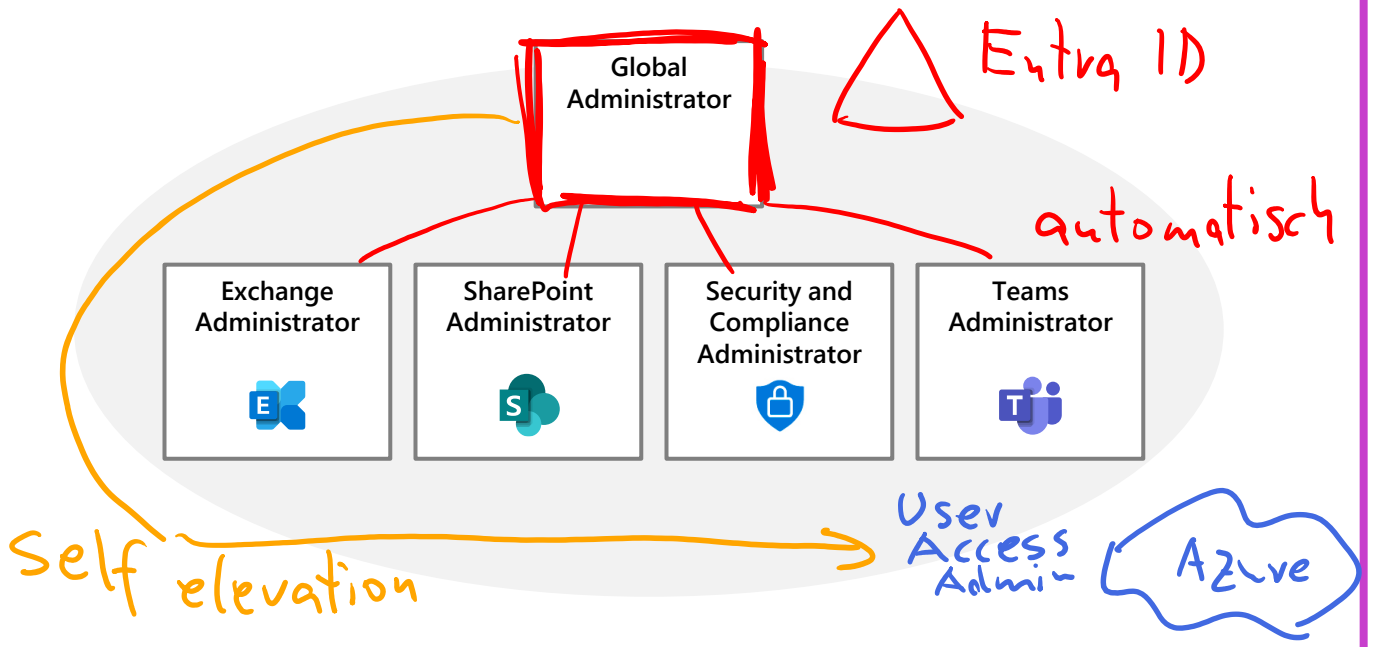


© Copyright Microsoft Corporation. All rights reserved.

Assign admin roles to users in Microsoft 365

In Microsoft 365, administrator roles assign specific administrative functions to users

- Each admin role maps to common business functions and gives permissions to do specific tasks in the Microsoft 365 admin center
- A user can be assigned multiple admin roles since they're not mutually exclusive
- You can manage admin roles in the Microsoft 365 admin center or Windows PowerShell
- To assign admin roles in the Microsoft 365 admin center, you must be assigned the Global administrator role

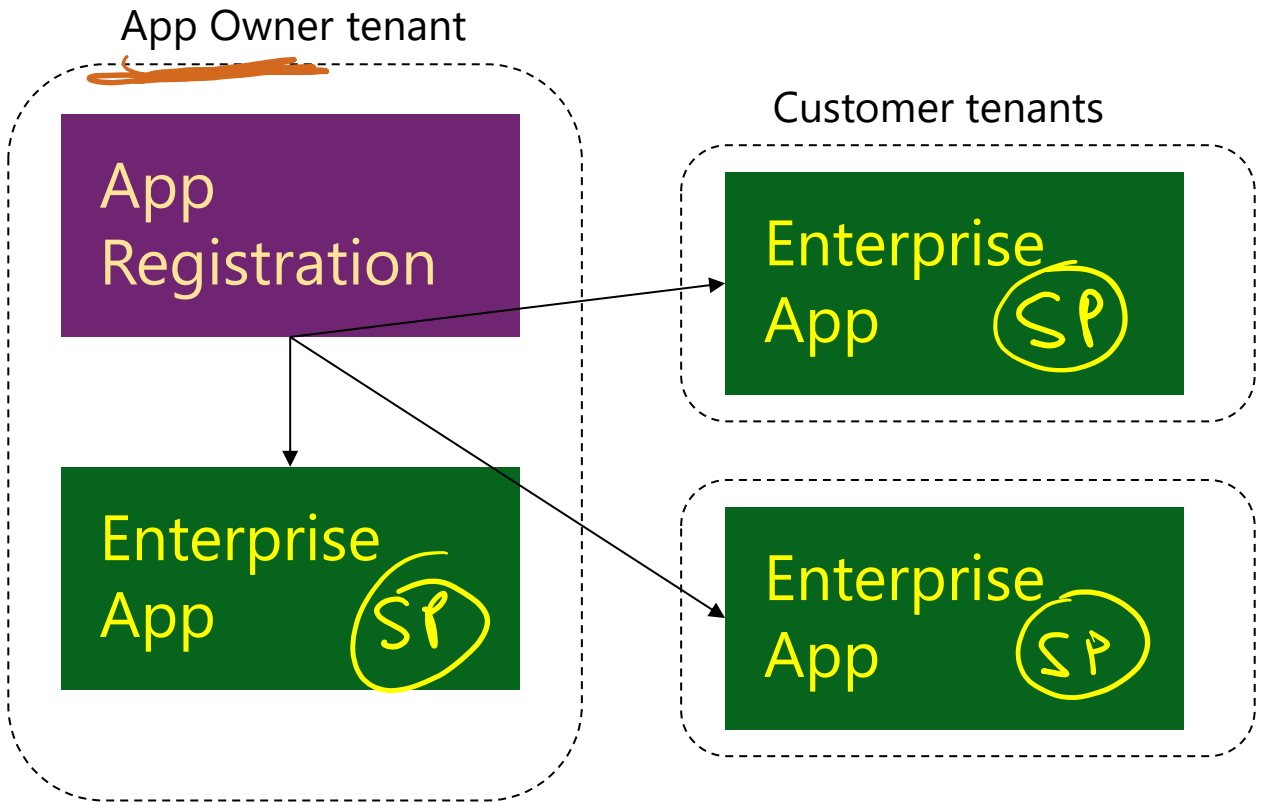


The Global administrator role includes ALL the service administrator roles, and not just the four shown in this example

Individual service administrators can administer their services on the highest level

© Copyright Microsoft Corporation. All rights reserved.

Register an App in Microsoft Entra ID



Global

- Unique application ID
- Redirect URI
- Branding
- API permissions
- Role definitions

Tenant-specific service principal

- Reference to application
  - + unique object ID
- User / group assignments
- Role assignments
- Visibility in portals

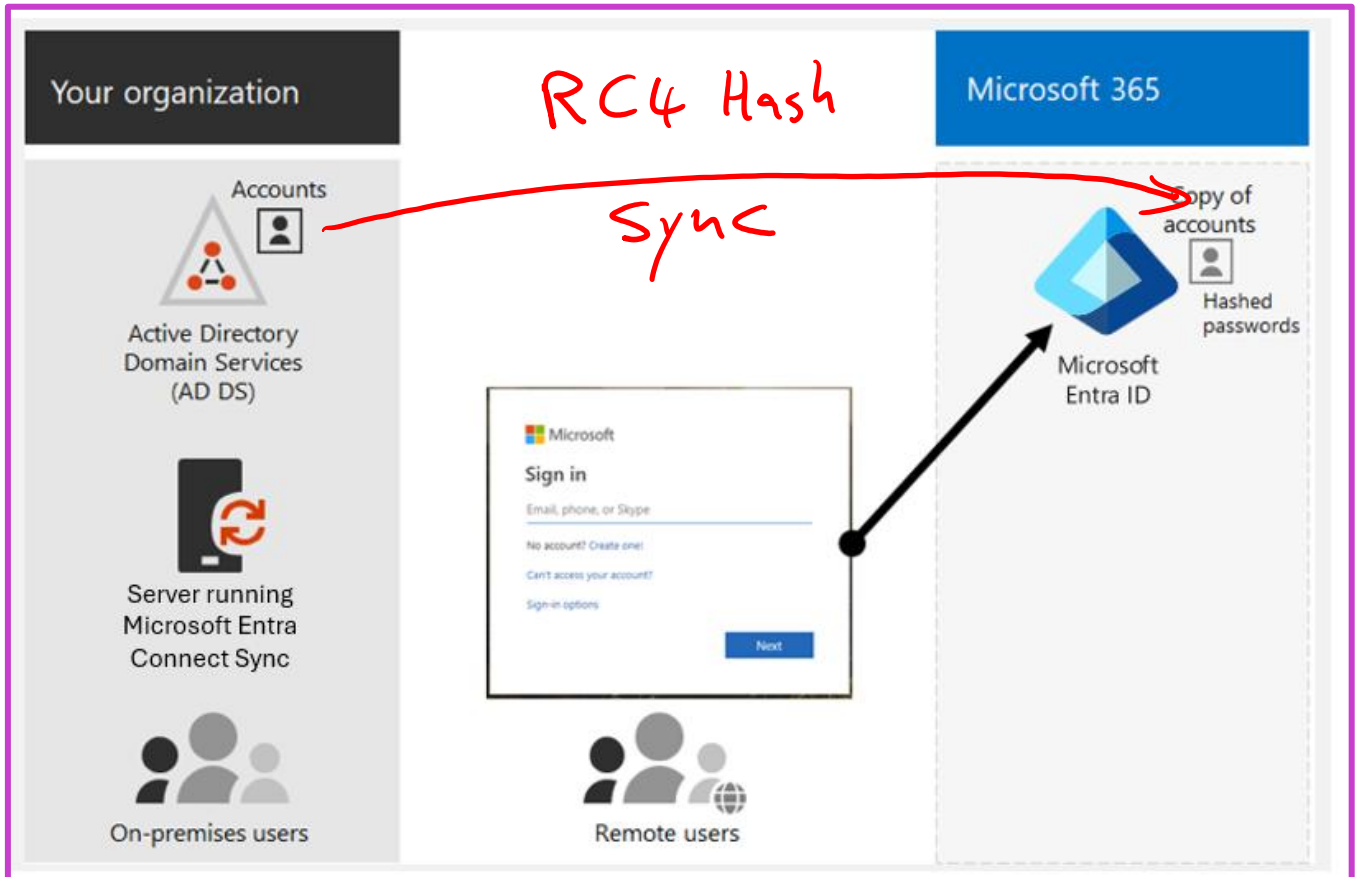
© Copyright Microsoft Corporation. All rights reserved.

Examine authentication options for the hybrid identity model

Managed authentication option 1:

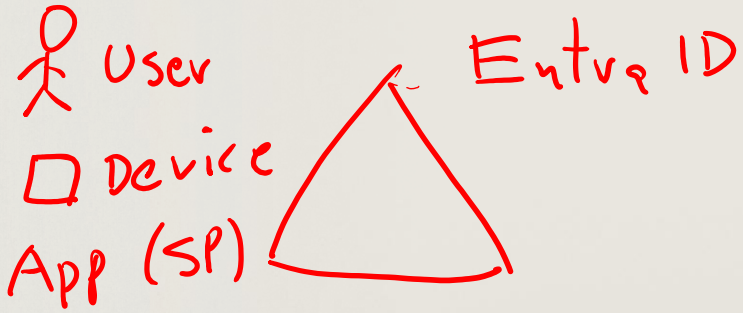
Password hash synchronization (PHS):

- Organizations synchronize their AD DS user accounts with Microsoft 365, and they manage their users on-premises
- Organizations don't have to deploy any extra infrastructure besides Microsoft Entra Connect Sync or Microsoft Entra Cloud Sync
- PHS uses a secure, one-way hash synchronization process to protect the user's password
- The password hash is encrypted during transmission and stored securely in Microsoft Entra ID, which uses the hash for authentication purposes.



PHS **never** sends or stores the actual password in Microsoft Entra ID, which helps protect against password-related attacks

© Copyright Microsoft Corporation. All rights reserved.



Manage users, groups, and licenses in Microsoft Entra ID by using Windows PowerShell

© Copyright Microsoft Corporation. All rights reserved.

Module overview

Microsoft 365 includes multiple cloud services. However, the core of Microsoft 365 is Microsoft Entra ID, which provides identity management for all the services in Microsoft 365. In this Module, you'll learn how to create users and groups, and manage roles and licenses.

Units:

- Benefits of using PowerShell for Microsoft 365
- Connecting to the Microsoft 365 tenant with PowerShell
- Managing users in Microsoft 365 with PowerShell
- Managing groups in Microsoft 365 with PowerShell
- Managing roles in Microsoft 365 with PowerShell
- Managing licenses in Microsoft 365 with PowerShell

© Copyright Microsoft Corporation. All rights reserved.

Benefits of using PowerShell for Microsoft 365

- PowerShell is an alternative to web-based consoles
- PowerShell has the following benefits over the web-based consoles:
  - Access to additional configuration options
  - Query for objects matching criteria and generate reports
  - Use of the pipeline to perform complex operations
  - Automation of bulk processes
  - Management of multiple services simultaneously

© Copyright Microsoft Corporation. All rights reserved.

Connecting to the Microsoft 365 tenant with PowerShell

- There are multiple modules for connecting to Microsoft Entra ID:
  - AzureAD
  - MSOnline
  - Microsoft.Graph
- Use the cmdlet **Install-Module** to install these modules from the PowerShell Gallery
- AzureAD and MSOnline have similar functionality but aren't exactly the same
- Microsoft.Graph is the focus of future development
- Azure Cloud Shell is a web-based prompt with modules automatically loaded

© Copyright Microsoft Corporation. All rights reserved.

Managing users in Microsoft 365 with PowerShell

- To create a user with AzureAD:
  - **$UserPassword=New-Object -TypeName Microsoft.Open.AzureAD.Model.PasswordProfile**
  - **$UserPassword.Password="Pa55w.rd"**
  - **New-AzureADUser -DisplayName "Abbie Parsons" -GivenName "Abbie" -SurName "Parsons" -UserPrincipalName AbbieP@adatum.com -UsageLocation US -PasswordProfile $UserPassword -AccountEnabled $true**
- Other AzureAD cmdlets for managing users:
  - **Get-AzureADUser**
  - **Set-AzureADUser**
  - **Remove-AzureADUser**
  - **Set-AzureADUserPassword**
  - **Get-AzureADRMSDeletedDirectoryObject**

© Copyright Microsoft Corporation. All rights reserved.

Managing users in Microsoft 365 with PowerShell (Slide 2)

- To create a user with MSOnline:
  - **New-MsolUser -DisplayName “Abbie Parsons” -FirstName “Abbie” -LastName “Parsons” -UserPrincipalName AbbieP@adatum.com -Password “Pa55w.rd“**
- Other MSOnline cmdlets for managing users:
  - **Get-MsolUser**
  - **Set-MsolUser**
  - **Remove-MsolUser**
  - **Set-MsolUserPassword**
  - **Set-MsolUserPrincipalName**
  - **Restore-MsolUser**

© Copyright Microsoft Corporation. All rights reserved.

Managing groups in Microsoft 365 with PowerShell

- There are multiple group types in Microsoft 365:
  - Microsoft 365 group Calendar Mailbox ID
  - Distribution group email Verteiler ~~ID~~
  - Security group ID
  - Mail-enabled security group ID
- Microsoft 365 groups are managed in Exchange Online as unified groups

© Copyright Microsoft Corporation. All rights reserved.

Managing groups in Microsoft 365 with PowerShell (Slide 2)

- To create a group by using AzureAD:
  - **New-AzureADGroup -DisplayName "Marketing Group" -MailEnabled $true -SecurityEnabled $true -MailNickname MarketingGrpDistribution group**
- To manage groups, you need to provide the **ObjectID** as a unique identifier
- Other AzureAD cmdlets for managing groups:
  - **Get-AzureADGroup** MG
    ADAL
  - **Set-AzureADGroup**
  - **Remove-AzureADGroup**
  - **Get-AzureADGroupMember**
  - **Add-AzureADGroupMember**
  - **Remove-AzureADGroupMember**
  - **Get-AzureADGroupOwner**

old	new
ADAL	MG (MSAL)

© Copyright Microsoft Corporation. All rights reserved.

Managing groups in Microsoft 365 with PowerShell (Slide 3)

- To create a group by using MSOnline:
  - **New-MsolGroup -DisplayName “Marketing Group”**
- Other AzureAD cmdlets for managing groups:
  - **Get-MsolGroup**
  - **Set-MsolGroup**
  - **Remove-MsolGroup**
  - **Get-MsolADGroupMember**
  - **Add-MsolADGroupMember**
  - **Remove-MsolADGroupMember**

© Copyright Microsoft Corporation. All rights reserved.

Managing roles in Microsoft 365 with PowerShell

- To enable a role by using AzureAD:
  - **$roleTemplate = Get-AzureADDirectoryRoleTemplate | Where {$_.displayName -eq ‘User Administrator’}**
  - **Enable-AzureADDirectoryRole -RoleTemplateId $roleTemplate.ObjectId**
- To add a user to a role by using AzureAD:
  - **$user = Get-AzureADUser -ObjectID AbbieP@adatum.com**
  - **$role = Get-AzureADDirectoryRole | Where {$_.displayName -eq ‘User Administrator’}**
  - **Add-AzureADDirectoryRoleMember -ObjectId $role.ObjectId -RefObjectId $user.ObjectID**
- To add a user to a role by using MSOnline:
  - **Add-MsolRoleMember -RoleMemberEmailAddress AbbieP@adatum.com -RoleName ‘User Administrator’**

© Copyright Microsoft Corporation. All rights reserved.

Managing licenses in Microsoft 365 with PowerShell

- To review available licenses by using AzureAD:
  - **Get-AzureADSubscribedSku | Select-Object -Property Sku*,ConsumedUnits -ExpandProperty PrepaidUnits**
- To assign licenses to a user by using AzureAD:
  - **$License = New-Object -TypeName Microsoft.Open.AzureAD.Model.AssignedLicense**
  - **$License.SkuId = ‘05e9a617-0261-4cee-bb44-138d3ef5d965’**
  - **$LicensesToAssign = New-Object -TypeName Microsoft.Open.AzureAD.Model.AssignedLicenses**
  - **$LicensesToAssign.AddLicenses = $License**
  - **Set-AzureADUserLicense -ObjectId AbbieP@adatum.com -AssignedLicenses $LicensesToAssign**
- To disable specific service plans by using AzureAD:
  - **$License.DisabledPlans = ‘7547a3fe-08ee-4ccb-b430-5077c5041653’**
  - **$License.DisabledPlans.Add(‘a23b959c-7ce8-4e57-9140-b90eb88a9e97’)**

© Copyright Microsoft Corporation. All rights reserved.

Managing licenses in Microsoft 365 with PowerShell (Slide 2)

- To review available licenses by using MSOnline:
  - **Get-MsolAccountSku**
- To assign licenses to a user by using MSOnline:
  - **Set-MsolUserLicense -UserPrincipalName “AbbieP@adatum.com” -AddLicenses “Adatum:SPE_E3”**
- To disable specific service plans by using MSOnline:
  - **$planList = “YAMMER_ENTERPRISE”,”SWAY”**
  - **$licenseOptions=New-MsolLicenseOptions -AccountSkuId $accountSkuId -DisabledPlans $planList**
  - **Set-MsolUserLicense -UserPrincipalName “AbbieP@adatum.com” -LicenseOptions $licenseOptions**
- To remove a license from a user by using MSOnline:
  - **Set-MsolUserLicense -UserPrincipalName “AbbieP@adatum.com” -RemoveLicenses “Adatum:SPE_E3”**

© Copyright Microsoft Corporation. All rights reserved.

Manage Exchange Online by using Windows PowerShell

© Copyright Microsoft Corporation. All rights reserved.

Module overview

Exchange Online is one of the most commonly used services in Microsoft 365. You can use PowerShell cmdlets to efficiently manage bulk operations and perform tasks that aren’t possible through the web-based administrative interface. Being adept at managing Exchange Online with PowerShell will make you a much better administrator.

Units:

- Connecting to Exchange Online PowerShell
- Managing mailboxes in Exchange Online
- Managing resources in Exchange Online
- Managing admin roles in Exchange Online

© Copyright Microsoft Corporation. All rights reserved.

Connecting to Exchange Online PowerShell

- To install the Exchange Online module:
  - **Install-Module -Name ExchangeOnlineManagement**
  - Scripts must be enabled
  - Basic authentication must be allowed for the WinRM client
- To connect to Exchange Online:
  - **$ProxyOptions = New-PSSessionOption -ProxyAccessType IEConfig**
  - **Connect-ExchangeOnline -PsSessionOption $ProxyOptions**

© Copyright Microsoft Corporation. All rights reserved.

Managing mailboxes in Exchange Online

- Mailboxes are created automatically for users when an Exchange Online license is applied
- Mailboxes created with **New-Mailbox** are typically:
  - Room
  - Equipment
  - Shared
- To modify a mailbox:
  - **Set-Mailbox AbbieP@adatum.com -ForwardingSmtpAddress DoraM@adatum.com -DeliverToMailboxAndForward $true**
- **Get-EXOMailbox** returns only a partial details by default
- Cmdlets to manage:
  - Mailbox permissions
  - Mailbox folder permissions

© Copyright Microsoft Corporation. All rights reserved.

Managing resources in Exchange Online

- Resource mailboxes are used to book equipment and rooms
- Delegates can approve meeting requests for resource mailboxes by running:
  - **Set-CalendarProcessing -Identity BoardRoom -ResourceDelegates AbbieP@adatum.com**
- Some parameters for the **Set-CalendarProcessing** cmdlet are listed in the following table:

-AllBookInPolicy	*-AllowConflicts*
-AllRequestInPolicy	*-AllRequestOutOfPolicy*
-AutomateProcessing	*-BookInPolicy*
-EnforceCapacity	*-MaximumDurationInLimits*
-RequestInPolicy	*-RequestOutOfPolicy*

© Copyright Microsoft Corporation. All rights reserved.

Managing admin roles in Exchange Online

- Exchange Online has admin roles that are separate from the Microsoft 365 admin roles, including:
  - Organization Management
  - Recipient Management
  - View-only Management
  - Records Management
  - Discovery Management
- To add a user to a role, you use:
  - **Add-RoleGroupMember -Identity “Recipient Management” -Member AbbieP@adatum.com**
- It’s possible to create customed role groups as well

© Copyright Microsoft Corporation. All rights reserved.

Manage SharePoint Online by using Windows PowerShell

© Copyright Microsoft Corporation. All rights reserved.

Module overview

SharePoint Online is a collaboration service that allows you to store and share information through a web-based interface. Many organizations use SharePoint sites to build web portals for departments. In this Module, you'll learn how to create a site and assign user permissions.

Units:

- SharePoint Online Management Shell overview
- Managing SharePoint Online users and groups with PowerShell
- Managing sites with Windows PowerShell
- Managing external user sharing with Windows PowerShell

© Copyright Microsoft Corporation. All rights reserved.

SharePoint Online Management Shell overview

- To install SharePoint Online Management Shell:
  - **Install-Module -Name Microsoft.Online.SharePoint.PowerShell**
- To update SharePoint Online Management Shell:
  - **Update-Module -Name Microsoft.Online.SharePoint.PowerShell**
- To connect to SharePoint Online:
  - **Connect-SPOService -Url https://yourtenant-admin.sharepoint.com**

© Copyright Microsoft Corporation. All rights reserved.

Managing SharePoint Online users and groups with PowerShell

- To assign permissions to a site, create a SharePoint group, then add Microsoft Entra ID users to the group
- SharePoint groups are created per site
- To create a SharePoint group:
  - **New-SPOSiteGroup -Group MarketingUsers -PermissionLevels Read -Site https://adatum.sharepoint.com/sites/Marketing**
- To add a user to a SharePoint group:
  - **Add-SPOUser -Site https://adatum.sharepoint.com/sites/Marketing -Group MarketingUsers -LoginName AbbieP@adatum.com**
- Security groups can also be added to SharePoint groups

© Copyright Microsoft Corporation. All rights reserved.

Managing SharePoint sites with Windows PowerShell

- SharePoint online contains sites for Collaboration, Microsoft 365 groups, Microsoft Teams, and OneDrive
- To create a SharePoint site:
  - **New-SPOSite -Url https://adatum.sharepoint.com/sites/Marketing -Owner AbbieP@adatum.com -StorageQuota 256**
- To review a list of available templates:
  - **Get-SPOWebTemplate**
- To modify a site:
  - **Set-SPOSite -Identity https://adatum.sharepoint.com/sites/Marketing -Title "Marketing Portal"**
- To review site configuration:
  - **Get-SPOSite -Identity https://adatum.sharepoint.com/sites/Marketing | Format-List**
- To remove a site:
  - **Remove-SPOSite -Identity https://adatum.sharepoint.com/sites/Marketing**

© Copyright Microsoft Corporation. All rights reserved.

Managing external user sharing with Windows PowerShell

- Configure sharing for a site:
  - **Set-SPOSite -https://adatum.sharepoint.com/sites/Marketing -SharingCapability Disabled**
- Valid values for SharingCapability are:
  - **ExternalUserAndGuestSharing**
  - **ExternalUserSharingOnly**
  - **ExistingExternalUserSharingOnly**
  - **Disabled**
- Other parameters for sharing include:

-DefaultLinkSharingType	*-DefaultLinkPermission*
-AnonymousLinkExpirationDays	*-OverrideTenantAnonymousLinkExpirationPolicy*
-ExternalLinkExpirationDays	*-OverrideTenantExternalLinkExpirationPolicy*

© Copyright Microsoft Corporation. All rights reserved.

Manage Microsoft Teams by using Windows PowerShell

© Copyright Microsoft Corporation. All rights reserved.

Manage Microsoft Teams by using Windows PowerShell overview

Microsoft Teams is a collaboration service that combines multiple Microsoft 365 services into a single interface. It's a useful tool for workgroups and projects. You can use the Microsoft Teams PowerShell module to perform tasks such as creating teams and managing user permissions.

Units:

- Overview of the Microsoft Teams PowerShell module
- Installing the Microsoft Teams PowerShell module
- Managing Teams with the Microsoft Teams PowerShell module

© Copyright Microsoft Corporation. All rights reserved.

Overview of the Microsoft Teams PowerShell module

- Cmdlets for team management in the Microsoft Teams PowerShell module use **Team** as part of the noun:
  - **Get-Team**
  - **Add-TeamUser**
  - **New-TeamsApp**
- Functions that manage communication policies include:
  - **Set-CsTeamsMeetingPolicy**
  - **Remove-CsTeamTemplate**
  - **New-CsTeamsEmergencyCallingPolicy**
  - **Get-CsTeamsMessagingPolicy**

© Copyright Microsoft Corporation. All rights reserved.

Installing the Microsoft Teams PowerShell module

- To install the module:
  - **Install-Module -Name MicrosoftTeams**
- To update the module:
  - **Update-Module -Name MicrosoftTeams**
- To connect to Microsoft Teams:
  - **Connect-MicrosoftTeams**

© Copyright Microsoft Corporation. All rights reserved.

Managing Teams with the Microsoft Teams PowerShell module

- To create a team:
  - **New-Team -DisplayName “Marketing Team“**
- Template use is limited within PowerShell
- To review a list of teams:
  - **Get-Team**
- To configure a team:
  - **Set-Team -GroupId 26be526d-201a-4af6-9918-2fdbf6306916 -MailNickName “MarketingTeam”.**
- To add a team member:
  - **Add-TeamUser -GroupId 26be526d-201a-4af6-9918-2fdbf6306916 -User AbbieP@adatum.com -Role Member**

© Copyright Microsoft Corporation. All rights reserved.

Lab – Managing Microsoft 365 with PowerShell

© Copyright Microsoft Corporation. All rights reserved.

Lab: Managing Microsoft 365 with PowerShell

- **Exercise 1:** Managing users and groups in Microsoft Entra ID
- **Exercise 2:** Managing Exchange Online
- **Exercise 3:** Managing SharePoint Online
- **Exercise 4:** Managing Microsoft Teams

Sign-in information for the exercises:

Virtual machines: **AZ-040T00A-LON-DC1** and **AZ-040T00A-LON-CL1**

Username: **Adatum\Administrator**

Password: **Pa55w.rd**

Lab scenario

You’ve created a new Microsoft 365 tenant. As a new administrator, you want to try using PowerShell to manage some of the Microsoft 365 services before you start deploying them to users.

© Copyright Microsoft Corporation. All rights reserved.

Lab-review questions

- Why do you need an **AssignedLicense** and an **AssignedLicenses** object to configure licenses?
- Which cmdlet do you use to configure auto acceptance of meeting requests for resource mailboxes?
- Which cmdlet do you use to list the templates available in SharePoint Online?

© Copyright Microsoft Corporation. All rights reserved.

Lab-review answers

- Why do you need an **AssignedLicense** and **AssignedLicenses** object to configure licenses?

  The **AssignedLicense** object contains the specific license you want to add or remove. The **AssignedLicenses** object contains the **AssignedLicense** object and indicates whether that license should be added or removed.

- Which cmdlet is used to configure auto acceptance of meeting requests for resource mailboxes?

  Set-CalendarProcessing

- Which cmdlet do you use to list the templates available in SharePoint Online?

  Get-SPOWebTemplate

© Copyright Microsoft Corporation. All rights reserved.

Learning Path Recap

In this learning path, we:

- Learned about giving access to the services in Microsoft 365, to create user accounts and then assign licenses that provide access to the services.
- Explored managing mailboxes, resources, and admin roles in Exchange Online with PowerShell.
- Learned to manage SharePoint Online users and groups with PowerShell.
- Learned how to use Microsoft Teams PowerShell module to perform tasks such as creating teams and managing user permissions.
